1. User submits their email address.

2. User sees message that an email with instructions on how to reset their password has been sent to the email address they submitted. If the email address is found a Reset Password record is created with an hour later expiration time and a unique token which is emailed to the User.

3. If the email address is found in the database, the sent email contains a reset link; if the email address is not found, the sent email contains an error message instead of a reset link.

4. User clicks on the Reset Password Link which opens the Reset Password Form and uses a unique token to find the Reset Password record; if that token a) is found and b) has not expired and c) has not been used the User sees the Reset Password Form; if not the User sees an error message.

5. User submits the Reset Password Form which uses the unique token from the Reset Password Link to find the Reset Password record; if that token a) is found and b) has not expired and c) has not been used: the User's password is changed, token is marked as ind_used = 1, User is sent an email, and a success message is created; if not an error message is created.

6. The User sees a success or error message.
